Application Testing Guide for Invoice Data Extractor

Introduction

The **Invoice Data Extractor** is designed to process PDF invoices. It extracts key details such as customer names, addresses, order details, and more, and compiles them into an Excel file for easy analysis.

Key Notes

- You have to use invoices given in the "data" folder **only**.

- You can also run the "script.ipynb" file available in the repository. If you want output in IDE.

- Check out GitHub repo for more info, **Click here**

How to Test the App

1. **Open the App**

    o Click on this link: **Live App**

    o The app will open on your browser. You'll see a simple upload page.

2. **Upload PDF Files**

    o Click on the **"Choose Files"** button.

    o Select **one or more** PDF invoices from **Data** folder given in repo. (IMP)

3. **Submit the PDFs**

    o After selecting the files, click the **"Upload"** button.

    o The app will process the uploaded files and extract the relevant details.

4. **Download the Excel File**

    o Once processing is complete, an Excel file will automatically download.

    o Open the file to review the extracted data. The Excel will contain:

        ▪ Customer Name

        ▪ Address

        ▪ Order ID

        ▪ Purchase Date

        ▪ Product Name

        ▪ Quantity

        ▪ Total Amount

5. **Check the Results**

    o Verify the accuracy of the extracted details by comparing them with the information in the uploaded invoices.
